

We are working with a specialty chemicals company to support them in gaining a better understanding of the benefits and challenges associated with the use of electronic materials (specifically electrically conductive adhesives, thermal management materials, conductive inks/pastes, EMI shielding materials, electronic coatings and solder pastes). This will help inform their future R&D strategy and ensure efforts are aligned with key industry needs.

At this time, we are seeking to better understand if there are any challenges in terms of the formulation or use of electronic materials. We are keen to speak with you if you are:

- A formulation scientist / expert with knowledge and experience in the development or manufacture of electronic materials*
- A user of electronic materials in the manufacture of electronic components or devices*
- Working (now, or previously) for a CDMO / converter in electronic manufacturing or assembly, and use(d) electronic materials*
- An ex-industry professional with a thorough knowledge of electronic material formulations, and the 'pros and cons' of use.*

If you can help, please get in touch at network@strategicallies.co.uk. We look forward to hearing from you and sharing more about this opportunity.
