

The client

Our client is an established personal care company that is interested in extending their technical understanding of chemical stabilizers. The company uses stabilizing technologies such as antioxidants and metal chelators in their formulations to increase the shelf life of personal care products. These ingredients quench free radicals and bind metal cations that can cause product instability and deterioration.

The search

Our client is searching globally for suppliers of chemical stabilizers for their cosmetic products who can provide detailed technical information to support their ingredients. Our client is primarily interested in single ingredient raw materials rather than proprietary blends and is looking for companies that can supply technical data to validate their ingredient's functional claims. The cosmetic chemicals will be suitable for personal care products launched worldwide.

Data requirements for cosmetic ingredient stabilizers

- Explanation of the ingredient's mechanism of action including supporting data
- Information on suitable formulation systems and formulation hints / handling indications
- MSDS, TDS, SDS and / or CoA sheets including data on stability, solubility, and organoleptic properties.
- Regulatory and human safety information (incl. worldwide cosmetic compliance for EU, UK, USA, or China), skin compatibility and toxicology
- Environmental safety data (e.g., biodegradability & ecotoxicity), origin statements (e.g., feedstock, Natural Origin Statement acc. to ISO 16128, and sustainable sourcing certifications if applicable)

Top priority will be cosmetic raw materials with proven performance of stabilizing the efficacy of cosmetic ingredients e.g. actives, lipids, colorants or equivalent, or preventing degradation, discoloration, or malodour development.

The personal care company may like to test samples of the chemical stabilizers upon request (100g quantities).

What the client can offer

Our client is looking for personal care ingredient suppliers as part of their program of new product development. They have a broad portfolio of brands and products and offer routes to market for companies developing technical and / or sustainable cosmetic raw materials and ingredients. The client prefers a supply relationship. This represents an excellent opportunity for an ongoing partnership with a leading cosmetic company. Please provide details of any potential technology partner or service provider to the Strategic Allies team at network@strategicallies.co.uk
